

📍 MUNICH

Automotive Engineer

Are you fascinated by projects such as Navigation, e-Mobility, Infotainment, Telematics, Connected Services, Augmented Reality and would like to further support these areas as a Project Engineer? In addition, have you initial professional experience in one of these topics regarding the automotive sector? Then you've to come to the right place in our team!

You will:

- › Define and specify requirements for the development of automotive features
- › Create test cases and execute tests in vehicles or with test benches
- › Analyze failed test cases, investigating the root cause and discussing solutions with the development team
- › Configure systems and applications impacting customers worldwide
- › Work in tandem with the customer's technical project managers to ensure the success of a project
- › Plan the feature rollout according to project milestones.

Our Requirements

- › You possess a technical degree in electrical engineering, information technology, computer science or comparable education with corresponding experience.
- › You have ideally already gained initial experience with location-based services or connected products.
- › You are an analytical thinker with the willingness to work in an agile environment.
- › You possess a German driving license.
- › You are business fluent in English, German will be considered as a Plus.

**Shape the future
with us!**
